

ICS Planning P

Integration into the K9ESV FieldComms Incident Management System

Overview

The ICS Planning P is the structured cycle of meetings, briefings, and planning activities that drives every operational period during an incident. The K9ESV FieldComms Incident Management System already stores all the data the Planning P needs — incident information, operational period timing, active roster, section assignments, and ICS forms. The proposed enhancement integrates the Planning P directly into FieldComms as an interactive, data-driven tool that guides the planning cycle in real time.

What Would Be Built

■ Interactive Planning P Visual Display

- A P-shaped timeline rendered on-screen showing every phase of the planning cycle
- Current phase highlighted so the IC and staff can see exactly where they are in the cycle
- Operational period times pulled automatically from the active incident record
- Each node on the P is clickable — opens the detail view for that meeting or activity

■ ICS Forms Listed Per Phase

- Each node on the Planning P shows the specific forms required for that phase
- Forms are direct links that open pre-populated with current incident data
- Example — Tactics Meeting node links to: ICS-215, ICS-215A, ICS-203, ICS-204
- Example — Operations Briefing node links to: ICS-201, ICS-205, ICS-206
- Example — IAP Preparation node bundles: ICS-202 through ICS-208 as a package

■ Attendee Lists Per Meeting

- Each meeting node shows who should attend based on their ICS role
- Cross-references the active roster — checked-in members appear by name
- Unchecked-in required roles flagged as unassigned — immediate gap identification for the IC
- Example — Tactics Meeting shows: IC, OSC, PSC, LSC, FSC, Safety Officer
- Example — Operational Briefing shows: all supervisors, Division/Group supervisors

■ Generate Briefing Sheets Per Phase

- Each planning phase can generate a printable one-page briefing cover sheet
- Includes: meeting time, standard agenda, attendee list, and required forms
- Serves as the IAP section cover for that phase of the cycle
- Printable directly from the Print Center alongside ICS-213, ICS-214, ICS-309

Planning P Phases — Forms and Attendance

PLANNING P PHASE	WHO ATTENDS	FORMS REQUIRED
Incident Briefing (ICS-201)	IC, Command Staff, incoming Section Chiefs	ICS-201 (Incident Briefing), ICS-202 (IAP cover)

Command & General Staff Meeting	IC, all Command Staff, all Section Chiefs (OSC, PSC, LSC, FSC)	ICS-202, ICS-203 (Organization Assignment)
Tactics Meeting	IC, OSC, PSC, Safety Officer, Resource Unit Leader, Situation Unit Leader	ICS-215 (Ops Planning Worksheet), ICS-215A (Safety Analysis), ICS-203, ICS-204
Operations Briefing (Shift Briefing)	All supervisors, Division/Group supervisors, Air Operations if applicable	ICS-201, ICS-204 (Assignment List), ICS-205 (Comms Plan), ICS-206 (Medical Plan)
IAP Preparation & Approval	IC, PSC, Safety Officer, Documentation Unit Leader	ICS-202, ICS-203, ICS-204, ICS-205, ICS-206, ICS-207, ICS-208
Operational Period Briefing	All incoming resources, outgoing resources, all Section Chiefs	Complete IAP package: ICS-202 through ICS-208, ICS-204 per division
After-Action / Debrief	IC, Command Staff, Section Chiefs, Documentation Unit Leader	ICS-214 (Activity Log), ICS-209 (Incident Status Summary)

Why This Is Feasible in FieldComms

The Planning P enhancement does not require new data entry or new infrastructure. FieldComms already stores everything the Planning P needs. The work is connecting that data to the visual P layout and generating the briefing output.

Incident & Period Data	Operational period times, incident type, status, and IC name are already stored in the ICS platform database and available via API
Active Roster	Member roles, certifications, and check-in status are already tracked — the Planning P attendee lists pull directly from this
ICS Forms	ICS-201 through ICS-215 are already built as fillable web forms in FieldComms — the Planning P simply links to them with the incident pre-selected
Print Center	The existing Print Center infrastructure handles form printing — briefing sheets would be added as new print targets alongside existing forms
PDF Generation	ReportLab PDF generation is already running on the Pi for other documents — Planning P briefing sheets use the same pipeline

How It Would Work — Operator Experience

- 1 IC creates a new incident in FieldComms and sets the operational period start and end times.
- 2 The Planning P page opens automatically, showing the full cycle with times calculated and filled in from the incident record.
- 3 The current phase is highlighted. The IC or PSC can see at a glance which meeting is next, who needs to be there, and which forms to prepare.
- 4 Clicking any phase node opens a detail panel showing the attendee list (with check-in status from the active roster), the required forms as direct links, and a Generate Briefing Sheet button.
- 5 Clicking Generate creates a one-page printable briefing cover for that phase — ready to include in the IAP package.

- 6** As the incident advances to the next operational period, the Planning P timeline updates automatically — times shift, the cycle repeats, and the next set of forms becomes active.

Value to K9ESV Operations

Guides less-experienced ICs	The Planning P tells newer ICs exactly what to do next, who to call, and which forms to fill out — reducing errors during the critical early hours of an activation
Eliminates form-hunting	Forms for each meeting phase are pre-linked and pre-populated — no searching through binders or trying to remember which ICS form goes where in the planning cycle
Instant gap identification	If a required role is not checked in when a meeting node is opened, the system flags it immediately rather than discovering the gap during the meeting itself
Consistent documentation	Every phase of the Planning P generates a documented briefing sheet, ensuring the incident record reflects the complete planning cycle regardless of which personnel are running the activation
Scales to any incident	The same tool works for a 2-hour weather net with one operational period or a multi-day SAR activation with rotating shift commanders — the cycle adapts to the incident data

Estimated Development Scope

Planning P visual layout	SVG/HTML canvas P-shaped timeline with clickable nodes — the most complex single piece of the build
Phase-to-form mapping	Logic table mapping each Planning P phase to its required ICS forms with direct links
Roster integration	Cross-reference active roster check-ins against standard ICS role requirements per meeting type
Briefing sheet generator	ReportLab PDF output — one-page cover per phase with time, agenda, attendees, and form list
ICS platform integration	Wire the Planning P page into the existing ICS platform — reads incident and period data from the existing API
Print Center addition	Add Planning P briefing sheets as print targets alongside existing ICS forms
Estimated build time	One full session — approximately 6–8 hours of development

The Planning P enhancement is additive — it does not change any existing FieldComms functionality. All current ICS forms, incident management, roster, and print features remain exactly as they are. The Planning P is a new page in the ICS platform section that pulls from data already in the system.
